SUMMARY

Frontend-focused Software Engineer with 2+ years of experience building and shipping production React/Next.js platforms end-to-end — real-time UI with WebSockets, AI-powered features, strong security practices, and measurable performance gains for six-figure user bases.

SKILLS

Expertise: React, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, TanStack Query, HTML5, CSS3, Tailwind CSS, Node.js, Express.js, REST APIs, Socket.IO, MongoDB, JWT / OAuth, Jest, React Testing Library, Cypress, Git / CI-CD, Agile / Scrum

Working Knowledge: Redis, Docker, WCAG Accessibility, Flutter (cross-platform mobile apps), LLM Orchestration & RAG tooling (OpenRouter, Gemini API, Mem0, Atlas Vector Search), Prompt Engineering, PII Redaction

EXPERIENCE

Software Developer — RegisterKaro

Mar 2025 – Present

- Built RegisterKaro's customer-facing web platform from scratch (Next.js 15, React 19, TypeScript), now serving 600+ internal users and 50,000+ customers.
- Designed a schema-driven, prefill-aware dynamic form and workflow engine (Zod + React Hook Form) with a dynamic pricing cart.
- Built an AI customer-support agent on a tool-calling LLM orchestrator (OpenRouter/Gemini) with rate limiting, budget caps, and PII redaction — handling 10,000–15,000 messages/day.
- Rebuilt real-time chat on Socket.IO with a Redis Streams adapter and idempotent message dedup — rendering live, ordered message streams with auto-reconnect for 400–600 concurrent daily users.
- Secured React/Next.js frontends with CSP, HSTS, and OAuth httpOnly-cookie authentication; improved load performance via code-splitting and list virtualization.
- Automated government-portal filings using Playwright, cutting per-filing time to under 1 minute and processing 1,260 GST filings in 30 days.
- Rebuilt every core screen of the company's Flutter mobile app pixel-perfect from Figma, including live status tracking.

Frontend Developer — TalentMonk

Jul 2023 – Jan 2024

- Built dashboards and task-management modules using React, Redux Toolkit, and TanStack Query, powering core business-facing product flows.
- Developed dynamic, configurable survey and workflow systems styled with Tailwind CSS to support varied business use cases.
- Optimized state management and API caching strategies, cutting redundant network calls by 40%.
- Partnered with backend engineers and product stakeholders to define API contracts and shipped accessible interfaces in Agile/Scrum sprints.

PROJECTS

- Careerly (careerly.space)** — AI job-search platform for automated job discovery and resume tailoring using Next.js, Node.js, and Qwen-based workflows.
- SafeDocs (safedocs.space)** — AI document-intelligence platform for semantic search and conversational querying using Next.js, LLM APIs, and vector search.
- GymBro (gym-bro-seven.vercel.app)** — Fitness platform for guided exercise discovery, workout generation, and progress-oriented user flows using Next.js.

EDUCATION

B.Tech in Electronics & Communication Engineering

J.C. Bose University of Science and Technology | 2017 – 2021
